```
# 1. Create a connection for DB and print the version using a python program
import MySQLdb

# Open database connection
db = MySQLdb.connect("localhost","testuser","test123","TESTDB" )

# prepare a cursor object using cursor() method
cursor = db.cursor()

# execute SQL query using execute() method.
cursor.execute("SELECT VERSION()")

# Fetch a single row using fetchone() method.
data = cursor.fetchone()
print "Database version : %s " % data

# disconnect from server
db.close()
```

Output : -

```
Database version : 5.0.45
```

```
# 2. Create a multiple tables & insert data in table
import mysql.connector

#Create the connection object
myconn = mysql.connector.connect(host = "localhost", user = "root",passwd = "g
oogle",database = "PythonDB")

#creating the cursor object
cur = myconn.cursor()
